It’s clear: alternative fuels like biodiesel will play a permanent and growing role in the world’s motor-fuel pool. Faced with that reality, manufacturers and handlers of the fuel will need to employ the best and most compatible pumping technology when transporting, transferring and storing biodiesel. And smart operators are turning to sliding-vane pumping technology offered by Blackmer®, Grand Rapids, MI, a member of the Pump Solutions Group (PSG™).

Blackmer’s industry-leading ability to handle biodiesel was spelled out to the readers of Biofuels International in the magazine’s January 2009 issue in a story that highlighted how sliding-vane technology offers critical advantages for biodiesel-manufacturing operations. Stories of this type are one of the ways that Blackmer and PSG are enhancing their publicity efforts, all of which are designed to give your customers clear examples of how our pumping technologies are the best for their many applications.
